Abstract (en)

[origin: WO2014165924A1] A test device comprises first and second indicia portions. The first indicia portion is configured to indicate the presence or absence of at least one medical condition based on identification of at least one biological entity in the biological sample. The second indicia portion is configured to display all or part of a composite code when the first indicia portion provides an indication of the presence of the medical condition, the code being substantially unique to the test device. The test device includes a printed circuit board and a portion of the composite code corresponds to a serial number of the printed circuit board.
