Abstract (en)
[origin: WO2014191154A1] The invention relates to an electric switching device comprising a first contact piece (8) and a second contact piece (9). The first contact piece (2) can be driven by means of a first kinematic chain (13). The second contact piece (9) can be driven by means of a second kinematic chain (14). The electric switching device comprises a first switching point (2) and a second switching point (3), which are electrically connected in series, the first contact piece (8) being associated with the first switching point (2) and the second contact piece (9) with the second switching point (3).
