Abstract (en)
[origin: EP2985087A1] There is provided an arrangement for treatment of horizontally curved walls (102) of a container (100), the arrangement comprising: a circular horizontal frame (110) following the perimeter of the walls (102) of the container (100) horizontally and supported by at least a fixed surface; a vertical frame (112) following the wall (102) of the container (100) vertically and configured to be movably coupled at its lower part to the circular horizontal frame (110); and a mounting unit (114) configured to be movably attached to the vertical frame (112) and to mount at least one machine tool for treating the wall (102) of the container (100), wherein the mounting unit (114) is configured to move vertically along the vertical frame (112), and the vertical frame (112) is configured to move horizontally along the circular horizontal frame (110).
