Abstract (en)

The invention relates to a cutter (17) and a method for making a barrier screen in a dike body for preventing soil particles. The cutter (17) comprises: - a part (19) that is oriented vertically when in use and that comprises a supply device (21) for supplying to soil material of said dike body a binder (15) for binding soil material that has been cut by said cutter, said vertically oriented part at a lower portion thereof being provided with chisels (24) for cutting said soil material during a downward movement of said cutter (17); - as well as a part (20) that is horizontally oriented when in use and that extends at both sides of said vertical part (19) and wherein said horizontal part has parts (20) that are provided at both sides and comprises cylinders (25) that are rotatable about a horizontal rotation axis and wherein said cylinders (25) are provided with ground cultivating members (26) for mixing soil material that has been machined by said chisels (24) and said ground cultivating members (26).
