Abstract (en)

[origin: WO2014170318A1] An agricultural baler comprising a flywheel that is connected via a cardan coupling to a PTO of a tractor, the cardan coupling comprising a torque-limiter adapted for disengaging the flywheel from the PTO when a predetermined torque is exceeded, wherein the cardan coupling further comprises transmission means that are switchable between a startup state and a running state, in the startup state the transmission means being configured to only partially transmit rotational movement of the PTO to the flywheel while in the running state the transmission means being configured to fully transmit rotational movement of the PTO to the flywheel.
