Abstract (en)
[origin: WO2014171838A1] A chair adjustment device having a housing configured for connection to a seat or a backrest and having a first actuating member (3) slidably arranged in the housing and configured for connection to the other one of the seat and the backrest. A second actuating member (2) is slidably arranged in the housing, and locking means (8a, 8b) are configured for releasably holding the first actuating member (3) in a fixed position in relation to the housing and is operable by the second actuating member (2). Force-transmitting means (10, 4) are configured for releasably holding the first actuating member (3) and are operable by the second actuating member (2) so as to move the first actuating member in relation to the housing.
