Abstract (en)
[origin: WO2014191369A1] The invention relates to an application nozzle (10) for an application system (100) for gel-like and/or paste-like compositions, wherein the application nozzle (10) has an inlet zone (12) and an outlet zone (14) for the composition, wherein the application nozzle (10) has a plane extending in the longitudinal direction of the application nozzle (10), in particular a plane of symmetry (E), and wherein the outlet region of the application nozzle (10) comprises a bearing region (20) perpendicular to the plane, in particular to the plane of symmetry (E), for the application nozzle (10) on a substrate as well as an outlet opening (16) for the composition and the bearing region at least partially chamfered. The invention further relates to an application system (100), an application device (200) and a method for applying a composition.
