Abstract (en)

[origin: WO2014170167A1] The invention relates to a household refrigerator (1), having a heat-insulating inner container (2), which is designed to delimit a storage area (3) for refrigerated goods, at least one shelf (4) mounted in the inner container (2), a door leaf (23) which is designed for opening and closing the storage area (3) and which has an inner side (24) facing the storage area, on which inner side at least one door rack (22) is mounted, and a transport securing element (6), which is formed from a flat bow-shaped element by folding and which has cutouts (7), wherein the transport securing element (6) is reformed by means of a single fold (8) to give a strip with a V-shaped cross section having two limbs (9a, 9b).
