Abstract (en)

[origin: WO2014170449A1] The invention relates to a kart comprising a chassis, a seat and a pedal assembly including a brake pedal and an accelerator pedal, said pedal assembly being slidably mounted on a beam solidly connected to the chassis, such that the distance between the pedal assembly and the seat can be adjusted. According to the invention, such a kart comprises return means associated with the pedal assembly, which can return the pedal assembly to a position at a reduced distance from the seat.
