Abstract (en)
[origin: US2016051810A1] Embodiments include a medical implant including a fixing device with at least one fixing element to fix the implant at a site of implantation (310). The implant includes a belt drive that rotates an actuation device, wherein the actuation device is coupled to the fixing device and converts the rotary movement into a longitudinal movement of the fixing device. Embodiments include an insertion device to insert the medical implant.
