Abstract (en)

[origin: WO2014173749A1] The invention relates to a dishwasher machine (1) that comprises a dishwashing chamber (2) enclosed by a dishwashing container (3) and a door (4), as well as a plurality of functional components (5) arranged in said dishwashing chamber and/or on the door, an optical display being associated with at least one functional component and indicating the operating state thereof and/or indicating a potential operation able to be implemented therewith. The optical display is formed from at least one spot of light (14) at least on a subsurface of said functional component (5) or its immediate surroundings, this spot of light (14) being produced from the light beam (16) directed from a lighting device (17) that is arranged at a distance from the functional component (5), and said lighting device (17) being controllable by a control device (18) such that it selectively illuminates the functional component (5) and/or its immediate environment, forming the spot of light (14).
