Abstract (en)

[origin: WO2014175891A1] The present invention relates to improved peelable resealable package for an unportioned or uncut food item having an integrated food cutting and serving platform formed from a substantially rigid planar laminate. The substantially planar rigid laminate comprises a rigid layer and a first thermoplastic film. The packages of the present also include a second thermoplastic member having a thermoformed cavity which encloses the food item and has a shape which generally conforms to the shape of the food item. The packages further comprise a planar marginal flange extending around the thermoformed cavity, and a continuous peelable resealable hermetic seal circumscribing the food item formed by heat sealing the first thermoplastic film to the second thermoplastic film.
