Abstract (en)

[origin: WO2014173499A1] The invention relates to a device for receiving an elastomer strand (37), in particular a sealing strand, that is to be conveyed to a processing location, and for feeding said elastomer strand at the processing location to a device (40) for separating pieces from the elastomer strand and processing them, said device having a roll (2) that receives the elastomer strand (37) in the form of a coil, a conveying container (1) that receives the roll (2) with the coil and systems for rotating the roll (2) within the conveying container (1) in order to unwind the elastomer strand from the roll (2) and feed it to the processing system (40). According to the invention, the conveying space required for the device after the elastomer strand (37) has been unwound from the roll (2) can be reduced.
