Abstract (en)
[origin: WO2014173561A1] A holder (2) for fastening a component (3), in particular a fuel distributor (3), via a holding element (7) to an internal combustion engine (4) comprises decoupling elements (8, 9), a fastening body (5) and a fastening means (6). Here, the fastening body (5) is fastened by means of the fastening means (6) to the internal combustion engine (4). Furthermore, the holding element (7) is fastened via the decoupling elements (8, 9) to the fastening body (5). Moreover, a prestressing element (10) is provided which is connected to the fastening body (5), wherein a prestress of the decoupling elements (8, 9) is set by way of a predefined arrangement of the prestressing element (10) relative to the fastening body (5), in which predefined arrangement the connection of the prestressing element (10) to the fastening body (5) takes place. Furthermore, a system (1) having a holder (2) of this type is specified.
