Abstract (en)

[origin: WO2014174032A1] The invention relates to a lighting assembly (1), comprising an elongated lamp housing (2), which is closed by a light output element (5) on a light outlet side, wherein a first group of light sources (10) of the same type is arranged within the lamp housing (2), which light sources are arranged substantially evenly distributed over the entire length of the lighting assembly (1), wherein at least one additional light source (20) and/or one sensor (15) is arranged in regions between the light sources (10) of the first group, which additional light source uses the light output element (5) to output light or which sensor records sensor data through the light output element (5).
