Abstract (en)
[origin: CA2899548A1] The invention relates to a linkage system for fireproof ceramic bricks for forming an arch-like support structure. According to the invention, the bricks have two interlocking elements in the X- and Y-directions which at the same time stabilize the linkage in the Z-direction. This makes it possible to easily arrange the bricks with continuous linkage in the X- and Y-directions but also in the Z-direction of the coordinate system.
