Abstract (en)

The present invention provides a pouch for containing a fibrous material, comprising a wall defining a cavity and extending in an axial direction of the pouch, a top portion, a bottom portion, and a dispensing aperture for dispensing fibrous material from the pouch in use. The dispensing aperture is smaller than a largest dimension of the bottom portion in a plane orthogonal to the axial direction such that the dispensing aperture allows the user to dispense any fibrous material contained within the pouch in a substantially rod-like shape.
