Abstract (en)

An electronic smoking device 1 includes a mouthpiece 2, a heating element 4 and a body portion 5 which contains a liquid reservoir 6. The heating element 4 is adapted to vaporize liquid 7 supplied from the reservoir 6 to generate an aerosol. A flow path 8 extends from the heating element 4 to the mouthpiece 2 and receives the generated aerosol. Two or more flavour carrying units 9, 10 are permeable to vaporized liquid 7 and carry flavoured material 11, 12. The flavour carrying units are selectively and individually exposed to the flow path 8 creating a flavoured aerosol which can be inhaled by a user.
