Abstract (en)  
Use: in the designs of men's special purpose underwear for temporary stay in premises with high temperature conditions, for example, when visiting the baths and saunas. Essence: cooling underpants for baths consist of belt, front and rear parts, interconnected by side seams. Underpants have additional panel forming with the front part a pocket-type cavity. Additional panel is executed in a trapezoid shape, the smaller base of which is fixed in the area of the bottom seam joining the front and rear parts. The large trapeze surface faces towards the belt and is provided with an elastic band. In the bottom part of the underpants' cavity there is a container with an opening for filling the cooling agent configured in shape of the bottom part of the underpants' additional panel. Technical advantages: improved ergonomic features; simplicity of filling and removal of the coolant of the container; versatility.
