Abstract (en)
The invention a package for elongate articles, in particular smoking articles and/or tobacco related articles. The package comprises a body having a front wall, a rear wall, a bottom wall and two side walls, and a shell comprising a front, a rear wall, two side walls and a top wall dimensioned to accommodate the body from a top side and at least cover the top side of the body in a closed position of the package, wherein the package further comprises a flap coupled between the body and an inner side of a wall of the shell, the flap being configured to allow the body to be pulled out of the shell, turned upside down into a reverse position and be inserted into the shell in the reverse position of the body such that an outer side of the bottom wall of the body faces the inner side of the top wall of the shell. The invention also relates to blanks for the package and a method of manufacturing the package.
