Abstract (en)

Break-in protection for a door (100) comprising a frame (110) and an outwardly opening door leaf (120), which door leaf comprises a first edge (122) provided with hinges (130) and an opposite second edge (121), which frame comprises a first frame part (113) and a second frame part (112), which break-in protection comprises a first elongated metal profile (140), which is disposed to be firmly mounted on the door leaf so that it projects a bit beyond said second edge in the principal plane of the door and covers both a door gap (103) and a portion of the second frame part. The invention is characterized in that the profile shape of the first metal profile contains a first planar profile part (146), which is disposed to bear against the door leaf, and a second bent profile part (142), which is disposed to run around a projecting part (111,144) of the second frame part so that at least one lengthwise portion of said projecting part is concealed by said second profile part.
