Abstract (en)
[origin: WO2014177797A1] The invention relates to a muscle biasing device which comprises: a frame to be wedged between a floor surface (30) and an upper structure (29) of a room, the frame comprising a structure bar forming an arc of circle, an upper element attached to a first end of the structure bar and a lower element attached to a second end of the structure bar intended for engaging with the upper structure of the room and the floor surface, respectively; a return element attached to the frame; a biasing element coupled with the return element suitable for being pulled by a user (27) toward the inside of the arc of circle of the structure bar and for exerting, on the biasing element, a return force that opposes the pulling force of the user.
