Abstract (en)
[origin: WO2014177332A2] The invention relates to a device (100) for operating an energy storage arrangement (2) of a motor vehicle (1), comprising a first charging device (110) with a generator device (111) which can be driven by an internal combustion engine (113) of the motor vehicle (1) via an electrically switchable coupling device (112), said first charging device (110) being designed to charge at least one electric energy store (3) of the energy storage arrangement (2) of the motor vehicle (1); comprising a second charging device (140) which is designed to charge at least one electric energy store (3) of the energy storage arrangement (2) of the motor vehicle (1) from an extravehicular electric energy supply device (150); comprising a detecting device (120) which is designed to detect at least one operating parameter of the motor vehicle (1); and comprising a control device (130) which is coupled to the first charging device (110), the second charging device (140), and the detecting device (120) and which is designed to control the first charging device (110) and the second charging device (140) using the at least one operating parameter.
