Abstract (en)

[origin: WO2014177416A1] The invention relates to a chassis frame for a rail vehicle having at least two bearing blocks (13) for bearing a torsion bar (3) of a roll stabilizer. In order to prevent an enlarging of the overall height by a torsion bar mounted on the roll stabilizer, according to the invention there are openings in the longitudinal beams (8) of the chassis frame which can receive a torsion bar (3) if the torsion bar (3) is mounted in the bearing blocks (13).
