Abstract (en)

[origin: WO2014177791A1] The tie-securing module 2 for a bundling machine comprises a retaining assembly 100, a knotting assembly 200, and a gearbox 11. The gearbox 11 comprises an intake which can receive a drive shaft and outputs formed by a plurality of driven shafts 23, 31, 33, 35, 37. It is designed such that each of the driven shafts 23, 31, 33, 35, 37 can be rotated in sequence under the effect of rotation of the drive shaft. The retaining assembly 100 and the knotting assembly 200 comprise components designed to be moved under the effect of the rotation of one of the driven shafts 23, 31, 33, 35, 37.
