Abstract (en)

[origin: WO2014177176A1] The present invention relates to a laundry treatment machine (1) comprising a drum (2) wherein the laundry to be treated is placed, an air circulation duct (4) through which circulation of processing air is effected such that drying of the laundry is performed subsequent to washing process, said laundry treatment machine (1) further comprising a closed cycle fan (5) circulating the processing air, an air-cooled condenser (8) and an outer air duct (10) along which an open cycle fan (9) functions to deliver cooling air from outer environment to the condenser (8) in order to provide cooling of the same, the air-cooled condenser (8) comprising at least one drying channel (6) arranged therein through which the processing air is circulated and at least one cooling channel (7) arranged therein through which the cooling air is circulated.
