Abstract (en)
[origin: WO2014177784A1] The invention concerns an electrical housing (1) comprising an insulating body (10) that comprises a lateral wall (11) closed at the back by a bottom wall (12) to delimit an internal volume for receiving at least one electrical apparatus mechanism. According to the invention, the electrical housing also comprises: - at least one electrical connection element (30, 40) fixed to said insulating body and comprising a first terminal that is accessible from said internal volume for connecting said electrical apparatus mechanism, and an external terminal (32, 42) that is located outside the insulating body for connecting an electrical conductor (3, 4), and - a lever (60, 70) for connecting and/or disconnecting the electrical conductor to/from the external terminal, which is movably mounted about a pivot axis transverse to said bottom wall.
