Abstract (en)  
[origin: WO2015000497A1] The invention relates to a container assembly (1), which comprises at least one container (2) that can be stacked, which has a base unit (17) having a main accommodating body (18) and having a carrying handle (16) and which also has two auxiliary accommodating bodies (33, 34), which sit on the main accommodating body (18) and cover a main accommodating chamber (21) formed therein in a basic position. Each auxiliary accommodating body (33, 34) has an auxiliary accommodating chamber (36) that can be closed by means of a pivotable closing cover (46). The auxiliary accommodating bodies (33, 34) can be moved into an access position, in which the auxiliary accommodating bodies make the main accommodating chamber (21) accessible. In addition, coupling means (6) are arranged on the base unit (17), which coupling means enable vertical coupling of a plurality of stacked containers (2).
