Abstract (en)

[origin: WO2014180883A1] The invention relates to a test device for carrying out examinations on a test body, which test device comprises a rail guide (1) comprising a slide unit (2) coupled to a drive unit for acceleration, on which slide unit a test body is arranged, wherein the drive unit is connected to a control unit and at least one scanning unit (4) for capturing image data of the test body is provided. According to the invention, the at least one scanning unit (4) is arranged on one further slide unit (6), which is arranged on a further rail guide that is arranged parallel to the rail guide (1) of the slide unit (2) of the test body, wherein the further slide unit (6) of the at least one scanning unit (4) comprises one separate drive unit (7) for accelerating the further slide unit (6), said drive unit being connected to the control unit. The invention further relates to a use of such a test device.
