Abstract (en)  
[origin: WO2014183909A1] The invention relates to a sliding arrangement, in particular a slide-out device for drawers, sliding doors, etc., having a sliding component and a pulling arrangement, which can be coupled to one another via a coupling component, wherein the pulling arrangement can be placed in a parked position with spring prestressing, and wherein the pulling arrangement can be blocked in the parked position by means of a blocking element. In order to ensure reliable transfer of a drawer or the like into the closed position, the invention provides for the blocking element to be blocked in the parked position of the pulling arrangement by means of a catch.
