Abstract (en)

[origin: WO2014186182A2] The invention relates to a commercial dishwasher (1) which is in the form of a batch dishwasher and has a treatment chamber (2) for accommodating washware which is to be cleaned and also has a drying device for drying washware which is accommodated in the treatment chamber (2) as required. The treatment chamber (2) is divided into a first region (2a) and a second region (2b) which is or can be physically separated from said first region. The drying device has a first sorption unit (3) containing a reversibly dehydratable dry material and has a first fan (5), which is associated with the first sorption unit (3), for forming a first air circuit in the first region (2a) as required in such a way that air is conducted out of the first region (2a) through the first sorption unit (3) and then returned to the first region (2a). The drying device has a second sorption unit (4) containing a reversibly dehydratable dry material and has a second fan (6), which is associated with the second sorption unit (4), for forming a second air circuit in the second region (2b) as required in such a way that air is conducted out of the second region (2b) through the second sorption unit (4) and then returned to the second region (2b).
