Abstract (en)

[origin: WO2014184341A1] A container closure assembly (10) comprises a collar (12) permanently connectable about a container filling/dispensing aperture, e.g. a neck (28, Fig. 5) of a container (14, Fig. 5). A cap (18) has a rotatably disengageable connection with the collar, e.g. a press-on, screw-off threaded connection, and the assembly includes a tear strip (64) which is removed to permit rotation of the cap relative to the collar and provide tamper indication. A pouring spout (16) is detachably connected to the cap and telescopically slideable within the collar. The tear strip may be provided on the collar, or in a skirt portion or top face of the cap. An easily grippable panel-like handle may be provided, which also comprises a ratchet detent which acts as part of an alternative tamper indicating mechanism.
