Abstract (en)  
[origin: WO2014186816A1] A container including: a body having a cavity for storing dispensable contents; a rim of the body defining an opening of the cavity; a flange extending outwardly away from the rim of the body; a cover affixed to the flange to seal the dispensable contents within the cavity; and a fracture portion located on the body, the fracture portion having a break path, whereby the container fractures along the break path upon the application of force exceeding a predetermined level on either side of the fracture portion, wherein the break path along which the container fractures extends beyond a single plane such that the break path includes a main portion having a fracture point in one plane and end portions each having a terminus in another plane.
