Abstract (en)

[origin: WO2014186572A2] A flexible film package having a resealable opening is provided. The package is comprised of a flexible film with at least a first film layer and a second film layer with a resealable adhesive disposed between portions of the first and second film layer. The flexible film defines at least a portion of an interior cavity where contents, such as discrete food articles, can be stored and a package opening provides access to the discrete food articles. Further, the package has a segmented opening with a plurality of opening windows separated by at least one cross tie that extends from one side of the opening to another side.
