Abstract (en)

[origin: WO2014185797A1] A process for the preparation of high purity amorphous pemetrexed disodium is characterized by reacting N-[4-(2-(2-amino-4,7-dihydro-4-oxo-3H-pyrrolo[2,3-d]pyrimidin-5-yl)ethyl)benzoyl]-L-glutamic acid with molar shortage of sodium cations generating compound in regard to carboxyl groups of free acid, under anhydrous conditions. Preferably, in that process pure crystalline Form 1 or Form 2 of N-[4-(2-(2-amino-4,7-dihydro-4-oxo-3H-pyrrolo[2,3-d]pyrimidin-5-yl)ethyl)benzoyl]-L-glutamic acid, containing from 27 to 31% of dimethyl sulfoxide, is used.
