Abstract (en)

[origin: WO2014184237A1] In an installation for producing a textile web-shaped material, comprising at least one device for parallelising fibres and at least one transport device for transporting the textile web-shaped material in transport direction, at least one device is provided for flow-through treating the textile web-shaped material with a gaseous medium, at least one device is provided for applying a binding agent to the textile web-shaped material, and at least one transport deflection device is provided, wherein the transport deflection device can deflect the textile web-shaped material around the device for flow-through treating the textile web-shaped material and/or around the device for applying a binding agent.
