Abstract (en)
[origin: WO2014184256A1] The present invention relates to a composite element (10), in particular a composite element (10) for an insulating-glass unit, at least comprising a first pane element (20) and at least one second pane element (22) and at least one first profile element (30), wherein the profile element (30) has at least one first connecting surface (32) and/or at least one second connecting surface (33), wherein the first and/or the second connecting surface (32, 33) are/is provided for applying and/or accommodating a first connecting means (40), wherein the first connecting surface (32) has provided adjacent to it a third connecting surface (34) for applying and/or accommodating a second connecting means (50), and/or the second connecting surface (33) has provided adjacent to it a fourth connecting surface (35) for applying and/or accommodating a second connecting means (50), and wherein the first pane element (20) and the second pane element (22) can be, or are, connected by means of the profile element (30) and of the first connecting means (40) and/or of the second connecting means (50). The present invention also relates to an insulating-glass unit (100), a profile element (30), a window, a door, and to a method for producing a composite element or an insulating-glass unit (100).
