Abstract (en)

[origin: WO2015014681A1] The invention relates to a housing, in particular an outer housing for a low-pressure steam turbine, which has, in its main surface, a substantially rectangular cross-section and in which the surfaces of lateral sheet metal walls (2) form parts of the housing. To reinforce the sheet metal walls (2), at least one annular reinforcing element (R1, R2, R3) is inserted and designed in such a way that it supports the sheet metal walls at points of the surfaces (3, 3').
