Abstract (en)

[origin: EP2998650A1] The subject of the invention is a cover of the combustion chamber in the pellets burner, having a housing (1) with an inlet whole (2) for pellets and rotary combustion chamber (3) surrounded with a cylindrical cover (4), connected with the housing, in addition, a space between the combustion chamber (3) and the cover (4) is a ring-shaped duct supplying air into the combustion chamber circumferentially placed on it. The ring-shaped duct (5) supplying air into the combustion chamber is closed in front of the cover (4) with its flange ring (6) directed towards inside of the chamber and a sealing ring operating together with it, connected permanently with the outer surface of the combustion chamber. According to the invention, a rear part (8) of the cover (4) is permanently connected with a compensatory plate (9), a surface of which is perpendicular to the longitudinal axis of the cover (4) whereas, the compensatory plate (9) is elastically connected with the burner housing (1).
