Abstract (en)

[origin: WO2014189553A1] Code elements may be selected from a graph depicting an application. The graph may show code elements as nodes, with edges representing connections between the nodes. The connections may be messages passed between code elements, code flow relationships, or other relationships. When a code element or group of code elements are selected from the graph, the corresponding source code may be displayed. The code may be displayed in a code editor or other mechanism by which the code may be viewed, edited, and manipulated.
