Abstract (en)
[origin: US2016081464A1] The invention relates to a cleaning element (1) to be fastened on a cylindrical basic body (2) having a longitudinal axis (4). The cleaning element (1) is designed as a cylindrical hollow element and comprises a skeleton (3) and a spiked lattice (5) stretched on the skeleton (3). The skeleton (3) is connected to the spiked lattice (5) by means of a rubber sealing compound (6), and an inner surface (7) of the cleaning element (1) facing the longitudinal axis (4) is formed by the skeleton (3) or the rubber sealing compound (6). The skeleton (3) is formed by support rings (8) which are arranged at certain intervals concentric with the longitudinal axis (4) and which are held by means of one or more webs (9) extending in the direction of the longitudinal axis (4).
