Abstract (en)
[origin: EP3000766A1] A lifting jack (1) comprising a body (3), base (2) and a support (4) to hold and allow the handling of a component, wherein:
-the body (3) is telescopic and comprises a piston (5) to attach the body (3) to the support (4),
-the support (4) includes a rigid part (8), which includes a claw provided with at least one pair of hooks (14) and is attached to a flexible part (9) formed by a deformable material; wherein both parts (8, 9) include holes (13, 10) of different diameters to receive and retain the piston (5) in two positions:
-a first position in which the support (4) receives the piston (5) through the hole (10) of the flexible part (9), and
-a second position in which the support (4) receives the piston (5) through the hole (13) of the rigid part (8).
