Abstract (en)  
[origin: GB2527795A] A method of operating a material handling machine implement which is moveable relative to a chassis of the machine, the method includes the steps of positioning the material handling implement 24 in a first position of a first region, moving the material handling implement to a second region (60 fig 2), providing a control system 52 to automatically return the material handling implement to the first region at a second position of the first region different to the first position of the first region, and then returning the material handling implement to the second region. The first region typically being a region where it is desired to dig a trench and the second region where it is desired to deposit spoil from the trench.
