Abstract (en)
[origin: WO2015028287A1] The invention relates to a handling device for handling a rotary cutter comprising at least two segments, said cutter being in particular a curved or circular blade, in particular for the transport of said blade to and the mounting and/or dismantling thereof on or from a blade receiving element which is preferably on a device for sharpening rotary cutters or a device for slicing food products. Said handling device comprises at least two receiving parts, each receiving part being designed to receive one segment.
