Abstract (en)

A location system for locating mobile wireless devices comprises at least one mobile wireless device (1a,1b) and at least one wireless receiver (3) configured to receive wireless transmissions from the mobile wireless device and to transmit bursts of device reports concerning the wireless transmissions to a report processor (11) of the system. The report processor is configured to receive the bursts of device reports from the wireless receiver, each burst of device reports to be received by the report processor during a respective burst reception time window. The report processor is also configured to vary the duration of the burst reception time window during use, in dependence at least upon: (i) a determination of a type of burst of device reports; and/or (ii) a measured duration of a previous burst of device reports.
