Abstract (en)
A connected portable device with a first analog display, whereby the connected portable device is further enabled to exploit business related information. The connected portable device comprises a second analog display; a status indicator enabled to indicate at least either one of a positive status or a negative status; a wireless communication means enabled to receive the business related information from a source located outside of the connected portable device; a controller means enabled to read the received business related information and output a first signal to the second analog display, the first signal causing the second analog display to display a value corresponding to the received business related information; and a second signal to the status indicator, the second signal causing the status indicator to indicate one of the positive status or negative status according to the received business related information. The connected portable device further comprises an analog movement enabled to display time on the first analog display by means of at least a second hand and a third hand.
