Abstract (en)

[origin: WO2014191120A1] The invention relates to oral and dental hygiene- and cleaning agents which contain, in relation to their weight, between 0.001 and 25 wt. % poly(lactic acid) particles and between 1 and 30 wt. % precipitated silicic acid(s) with a specific surface area according to ISO 5794-1, appendix D, of ≤ 60 m²/g. Said agents exhibit a reduced damaging action in comparison to pure silicate-based compositions. In particular, the sensitivity of the teeth during and after the cleaning process is reduced.
