Abstract (en)  
[origin: WO2014195740A1] Facility for safe treatment of liquid and solid waste from communal and industrial waste dumps. The final product is fitting for further use in several ways: - As solidificate suitable for transportation - As solidificate suitable for transformation into silicate conglomerate or gascement - As solidificate used for obtaining calcium oxide and ash Overall energy required for successful treatment is increased with additional energy from two sources: - Recirculation of hot steam and gases in heat exchangers - Solar panel This way we need less additives based on calcium to obtain high quality product while keeping the process cost-effective.
