Abstract (en)

[origin: WO2014191122A1] The invention relates to a method for reprinting at least one individualised print copy, wherein the at least one individualised print copy to be reprinted belongs to a set of print copies to be printed in a certain print job, wherein the set of printed print copies belonging to the certain print job is inspected for completeness by an inspecting device (11) along a route (s) to be travelled by said print copies, wherein the at least one print copy to be reprinted is removed from the set of print copies printed in the certain print job as the at least one print copy to be reprinted travels along the route (s), wherein the removed individualised print copy in question is identified by an identifying device, wherein the at least one identified print copy in question is reprinted by the printing unit (03) which individualises at least one print copy, in addition to the set of print copies printed in the certain print job, on the basis of a signal sent to said printing unit by the identifying device.
