Abstract (en)  
[origin: WO2014191530A1] The invention concerns a lighting module for a motor vehicle headlight, comprising at least one light source and optical means for forming a light pattern, or pixel, comprising a region illuminated in a vertical light strip (1) delimited by two vertical edges, optical means being provided in order to form also at least one light strip (2, 3) transversely to the vertical light strip (1), with at least two transverse edges, such that the light pattern comprises at least one vertical strip and at least one transverse strip.
